

PROTEIN

Eucalyptus wool wash

Introduction

To launder blankets and other washable woolen fabrics without causing shrinkage and felting, it is essential that a special wool-washing product is employed. Protein effectively removes most soiling easily and efficiently and, as it is free rinsing, woollen garments treated in protein may be washed without a rinsing operation.

Features and Benefits

- Protein is designed specifically for washing wool.
- When used as recommended, it will not cause shrinkage or felting.
- Protein may be used for hand washing and machine-washing in both domestic and industrial machines.
- Woollens may be washed in Protein are left delicately perfumed and thoroughly clean.

Use Directions

Hand washing: Mix 25 mls of Protein for each 5 litres of warm water. Gently wash the garment for about five minutes, squeeze excess water from garment and place flat on towel to dry.

Machine washing: Use 100 mls of Protein per load in warm water and program or a wool wash or gentle cycle of not more than four minutes.

Industrial applications: Use directions depend on the temperature and scope of wash. Full wash programs will be provided by your Chemform representative.
